

Aref Kanaanpour

Senior .NET Developer - Systems & Distributed Architecture

Email: aref.kanaanpour@gmail.com | LinkedIn: linkedin.com/in/arefkanaanpour | GitHub: github.com/Akanaanpour | Telegram: t.me/Arefkp | Iran

PROFESSIONAL SUMMARY

Senior .NET Developer with 8+ years of software engineering experience, including 4+ years building aviation maintenance and logistics systems. Specializes in distributed backend systems using C# and ASP.NET Core, with hands-on delivery across system design, Domain-Driven Design (DDD), CQRS and microservices. Comfortable owning a system from requirements and architecture through production deployment and reliability.

CORE SKILLS

Languages: C#, JavaScript, Python, C++

Frameworks & Libraries: ASP.NET Core, EF Core, Dapper, MediatR, SignalR, Hangfire, AutoMapper, FluentValidation, Polly, Serilog, Blazor, jQuery

Architecture & System Design: Domain-Driven Design, CQRS, Microservices, Onion Architecture, Clean Architecture, Vertical Slice Architecture, Event-Driven Architecture, API Gateway, SOLID, Design Patterns, System Design

Data & Messaging: SQL Server, PostgreSQL, Redis, RabbitMQ, Caching

Engineering Practices: Unit & Integration Testing, Architecture Testing, CI/CD, Dependency Injection, Resilience & Retry Policies, Structured Logging, Observability, REST API Design

Tools & Platforms: Docker, Git, GitHub Actions, Cloudflare Workers, Swagger/OpenAPI, Postman

PROFESSIONAL EXPERIENCE

Senior .NET Developer

Iran Airtour Airline | 2022 - Present

- Work with business and operational stakeholders to analyze workflows, identify system and process gaps, and translate objectives into functional and technical requirements.
- Define technical specifications, service responsibilities, API contracts, data flows, integration requirements and acceptance criteria for the engineering team.
- Own system design and end-to-end technical delivery of core aircraft maintenance and logistics systems: domain modeling, application architecture, backend services, database design, API integrations, security, observability and production deployment.
- Participate in architecture and technology decisions, evaluating trade-offs to deliver scalable, maintainable solutions aligned with business and platform strategy.
- Retired a legacy maintenance-tracking system by migrating its replacement platform from .NET 5 to .NET 8.
- Resolved recurring performance issues on high-volume data services.
- Built the management reporting and procurement/parts-sourcing platform that now drives roughly 90% of technical HR resource planning and purchasing, end-to-end.

Founder & Software Lead

HOBA Startup Collection - Tehran | 2021 - 2023

- Architected a microservices-based data monitoring platform from the ground up, including APIs for ingesting and storing sensor data from field nodes at scale.
- Programmed the microcontrollers feeding sensor data into the platform.
- Shipped IoT monitoring and control devices for agriculture, livestock and food/pharma storage, plus the web app used to monitor and operate them remotely.
- Led the team responsible for design, development and delivery.

IT & Communications Supervisor

Ariana Afraz Barmand Co. - Karaj | Nov 2018 - Feb 2021

- Built and operated monitoring software on Onion Architecture, plus the microservices and enterprise APIs connecting it to pharmaceutical partners, the Ministry of Health and the Food & Drug Administration.
- Programmed microcontrollers for smart pharma/food-industry devices, including data loggers and controllers, as part of the company's R&D team.

Web Designer

Uption Startup Project - Karaj | Oct 2016 - Feb 2018

- Internal CMS developer on a small team, designing and building web modules for the company's CMS and early web applications.

SELECTED PROJECTS

Finex (Open Source, Featured) - github.com/Akanaanpoor/Finex

Telegram bot and Mini App for tracking income, expenses and installments on the Persian (Shamsi) calendar, with due-date reminders and balance forecasting. Runs entirely on Cloudflare Workers. Stack: Cloudflare Workers, Telegram Bot API, Workers KV.

Timex (Open Source) - github.com/Akanaanpoor/Timex

Fully serverless Telegram Mini App for work logging and time tracking, running entirely on Cloudflare Workers and KV.

UnitofWork (Open Source) - github.com/Akanaanpoor/UnitofWork

Hands-on implementation of the Unit of Work pattern with a generic repository, built on .NET Core Web API.

Design Patterns (Open Source) - github.com/Akanaanpoor/Design-patterns

Working reference collection of classic design pattern implementations in C#.

Additional case studies: Amazon Seller Visibility Platform (Web, Growth Tooling); Smart IoT Monitoring Devices (AVR, IoT, .NET); Vision-Based Dust Detection (Python, Image Processing) - shown at Pharmed International Exhibition 2019.

EDUCATION

B.Sc. in Computer Engineering (Software Engineering)

Islamic Azad University, Karaj Branch
